

The Optimal People Picker for SharePoint 2010 enhances your SharePoint deployment, providing a powerful new People Picker that both administrators and end users demand.

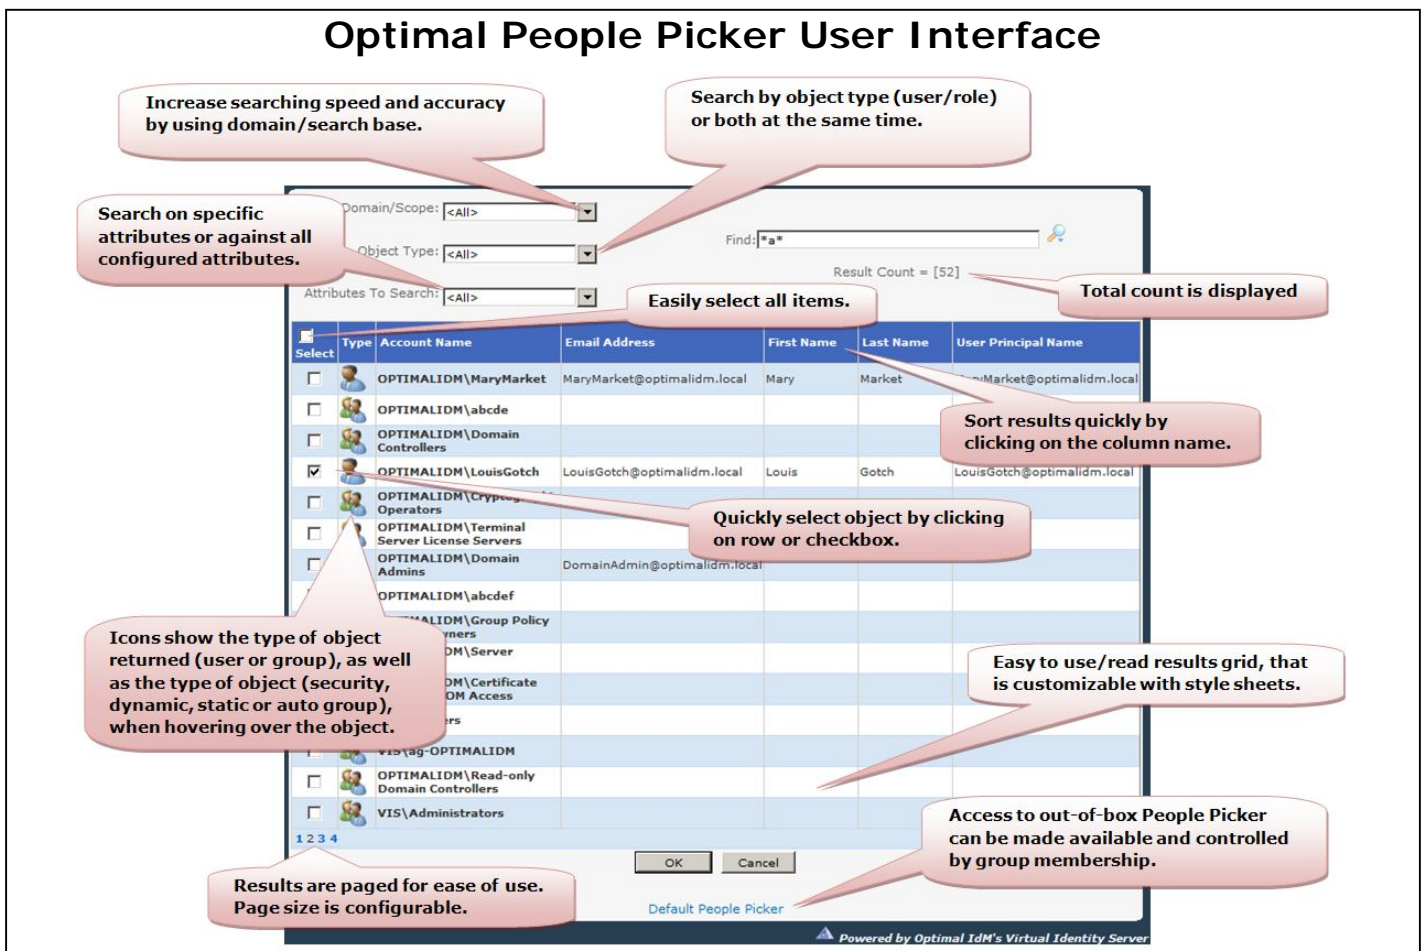

This one of a kind product allows administrators to easily enforce additional security, while delivering end users a powerful and configurable search interface.

Don't you wish your People Picker could...

- Allow searching on an attribute other than User Id
- Provide paged and sorted results in a simple and easy to use interface
- Display additional details/attributes in the search results other than the defaults
- Require that end users apply permissions using groups and not individual users
- Provide the ability to filter results based on the users and their groups/roles
- Allow for wildcard searches and on multiple attributes at the same time

The Optimal People Picker provides this and much more!

Optimal People Picker User Interface

The screenshot shows the user interface of the Optimal People Picker. It includes a search bar with a 'Find:' field containing '*a*', a 'Domain/Scope' dropdown set to '<All>', an 'Object Type' dropdown set to '<All>', and an 'Attributes To Search:' dropdown set to '<All>'. The 'Result Count' is displayed as [52]. Below the search controls is a table with columns: Select, Type, Account Name, Email Address, First Name, Last Name, and User Principal Name. The table contains several rows of user and group information, with the third row (OPTIMALIDM\LouisGotch) selected. Callouts point to various features: 'Increase searching speed and accuracy by using domain/search base.' points to the Domain/Scope dropdown; 'Search on specific attributes or against all configured attributes.' points to the Attributes To Search dropdown; 'Search by object type (user/role) or both at the same time.' points to the Object Type dropdown; 'Easily select all items.' points to the Select column checkboxes; 'Total count is displayed' points to the Result Count; 'Sort results quickly by clicking on the column name.' points to the column headers; 'Quickly select object by clicking on row or checkbox.' points to the selected row; 'Icons show the type of object returned (user or group), as well as the type of object (security, dynamic, static or auto group), when hovering over the object.' points to the icons in the Type column; 'Easy to use/read results grid, that is customizable with style sheets.' points to the table; 'Results are paged for ease of use. Page size is configurable.' points to the pagination controls at the bottom; and 'Access to out-of-box People Picker can be made available and controlled by group membership.' points to the bottom right corner.

Optimal People Picker for SharePoint

A Powerful Customizable People Picker for SharePoint

"The Optimal People picker is simply incredible! It provides us with an intuitive and efficient method to allow SharePoint users to find users and groups they are entitled to see, while ensuring they do not have the ability to openly browse our corporate directories. Simply put, we decide what the people picker exposes and not the tool. This is critical in a enterprise environment that includes employees, partners, and customers. In short, with the Optimal People Picker we have a better user interface, enhanced security, and increased productivity packaged in a single product." Gregg Fabbri - Sr. Director - Information Technology—PTC Web Systems

Key Features

Sorting and Paging of Search Results

The easy to use web interface sorts and pages the results in an efficient grid format.

Context Sensitive Filtering

Search results can be filtered based on **who** is performing the search as well as the **type** of search being performed.

Enhanced attribute searching and display

Search on (and display) any attribute on a user or role/group. **Wildcard searches** can even be executed across multiple attributes at the same time.

Fast and Easy to Deploy

Deploys in minutes, but will save end users and administrators **hundreds** of hours searching for the right objects.

Multi-Repository Searching

The Optimal People Picker leverages the Virtual Identity Server, allowing searches and security to be applied across multiple backend repositories (i.e. LDAP directories and databases).

Customizable Search Templates

Contains the pre-built search criteria, providing a fast and easy way to execute common searches.

Key Benefits

Data Separation Security

Administrators can apply role-based security filters to decide what end users can search on and view, keeping data separated and secure.

Increased Security

Administrators have the ability to restrict the assignment of SharePoint permissions to groups, disallowing permissions being assigned to individual users. This can help ensure that least privileged access is maintained.

Faster and More Accurate Searches

Feature such as: *searching multiple attributes at once, viewing additional attributes in the result list and search templates* all result in faster and more accurate searches.

Eliminate User Frustration & Save Time

The easy to use interface with features such as sorting and paging, reduces end user frustration and can save **hundreds** of hours searching for the right object.

Significantly Reduces Costs

Significantly reduces your SharePoint administration costs by providing a more efficient and easier way to manage SharePoint resources, that reduces troubleshooting and eliminates errors.

About Optimal IdM, LLC.

Optimal IdM, LLC. is a leading global provider of identity management software and consulting solutions. Headquartered in Land O' Lakes Florida, Optimal IdM provides sales and services through regional offices across the United States and a growing network of resellers and distributors.
